

# FALCON™

## Highly effective surface disinfectant spray

Falcon is a highly effective chlorine dioxide spray. It is designed for the rapid disinfection of small hard surfaces within animal healthcare environments. When used as part of a daily or weekly deep clean regime, Falcon is an excellent preventative method for outbreaks.

- Ready-to-use: no dilution required
- Sporicidal in 60 seconds
- For small hard surface areas
- No rinsing required

Falcon utilises a reusable trigger spray head for the distribution of chlorine dioxide. Falcon's base pack consists of one bottle containing sodium chlorite solution and one bottle containing an organic acid solution. This delivery format enables chlorine dioxide to be generated at point of use and at one concentration for each application.

Falcon is available in single packs

### How to assemble and use Falcon

#### Step 1

Take one head and remove both bottle caps from the Falcon pack.

#### Step 2

Insert the the re-usable trigger head into the open bottle neck.

#### Step 3

Fasten the levers on each side. Falcon is now ready to be used.

#### Step 4

Apply Falcon to surfaces, avoiding ingress into equipment. Spread evenly with a wipe (Tristel Dry Wipes are recommended).

#### Step 5

Allow surface to dry naturally providing a contact time of at least 60 seconds. No rinsing is required.

#### Step 6

The head is designed to stop working when the refills are empty. Once the trigger head stops working, change the Falcon pack (even if there is liquid left in either side of the bottle). The trigger head can be re-used for the next Falcon pack.

Dry Wipes are available in tubs of 200 wipes

# A surface disinfectant vets and animals can trust

Falcon is based on Tristel's patented chlorine dioxide (ClO<sub>2</sub>) chemistry, which pioneered the replacement of glutaraldehyde in UK hospitals. Chlorine dioxide has been used by the NHS for 20 years and is a powerful biocide that kills microorganisms in short contact times.

## Why choose Falcon?

### Classified and labelled in accordance with the Biocidal Products Directive 528/2012

Falcon is ideal for eliminating outbreaks and preventing closures:

- Effective against multi-drug resistant and spore forming organisms
- Practical and feasible contact time of 60 seconds
- Easy to use

### Suitable for the disinfection of hard surfaces

Falcon is designed for the rapid disinfection within:

- Operating theatres
- Isolation rooms
- Reception areas
- Consultation rooms
- Unoccupied animal habitats

*Note: Falcon is not suitable for use on fabric or soft furnishings*

### Kills organisms in accordance with EN14885

Falcon is sporicidal, mycobactericidal, virucidal, fungicidal and bactericidal. It is effective against microorganisms of concern in animal healthcare, including:

- *Clostridium difficile* spores
- *Bacillus subtilis* spores
- MRSA
- Canine parvovirus
- Feline calicivirus
- Bovine enterovirus
- *Candida albicans*
- *Adenovirus*
- *Pseudomonas aeruginosa*
- *Staphylococcus aureus*
- *Escherichia coli*
- *Proteus vulgaris*
- *Aspergillus brasiliensis*
- *Mycobacterium avium*
- *Bordetella bronchiseptica* (kennel cough)
